spring on the terrace

Always take a calculator when shopping for quantity recipes to quickly and easily calculate the most appropriate package sizes for your particular needs. We have listed most items in ounces so that you are not limited to size-specific packaging if shopping in bulk. When in doubt over what amount to buy, always round up—it's far better to have a little extra of an ingredient than to run out while cooking. If your eighth-grade algebra skills have gotten rusty, remember that there are 16 ounces in a pound and 8 fluid ounces in a cup. See page 73 for additional conversions.
